

COMPANY PROFILE 2025

METCO DRC

Metallurgical Consulting SARL

Independent engineering, metallurgical and operational support for mining companies, research institutions and process engineering partners across the DRC mining sector.

ESTABLISHED 2018

INDEPENDENT ADVISORY

LUBUMBASHI, DRC

STRATEGIC DIRECTION

A focused partner for mining and metallurgical performance.

METCO remains independent of major firms to ensure unbiased, objective support to every client and stakeholder in the mining value chain.

Vision

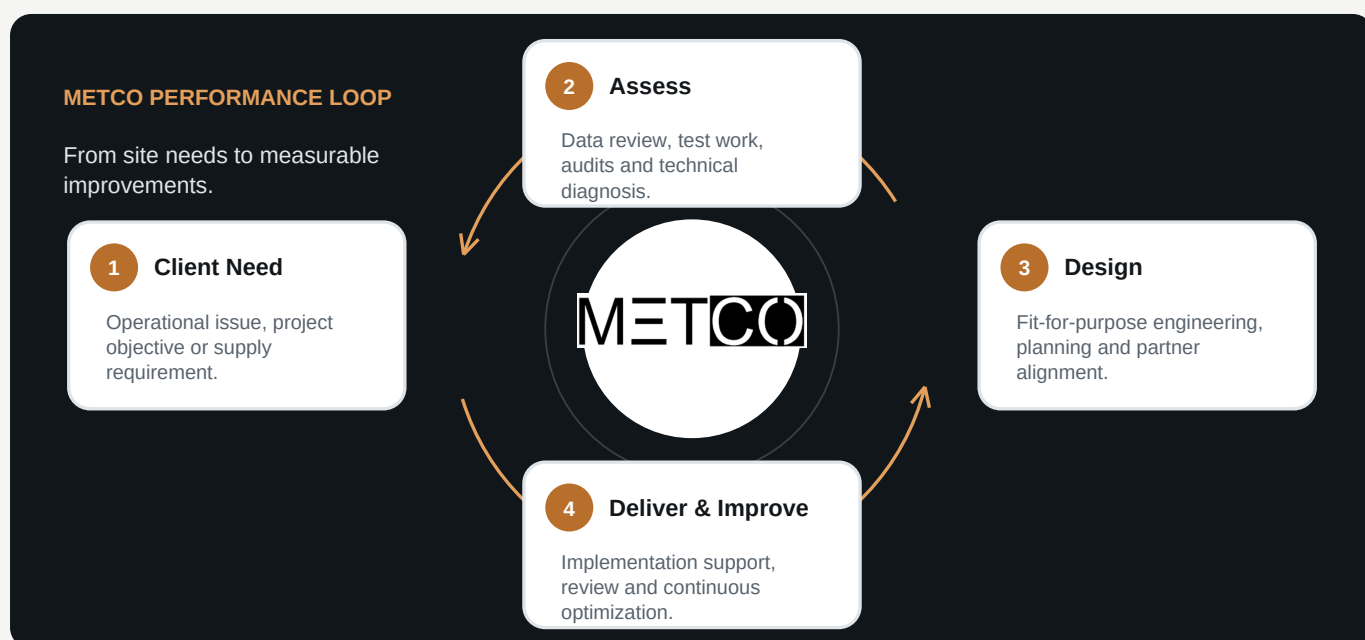

To be the mining industry's strategic partner of choice where expert engineering skills are required.

Mission

To form strategic alliances that promote new ventures, optimize design quality and improve productivity.

Positioning

To connect mining companies, engineering companies and research institutions with objective technical support.

COMPANY BACKGROUND

Engineers with practical operational experience.

METCO is a highly focused consulting company established in 2018 by engineers with experience in metallurgy, mining, civil engineering, electrical engineering, geology, PPE supply, mining maintenance, valve repair, filter press rollers, plant piping, fuel supply and cleaning services.

The company was formed to satisfy a growing need for competent engineers in operations optimization and process design within the DRC mining industry.

METCO initially concentrated on metallurgical processing projects and has grown to provide services in civil engineering, mining engineering, electrical engineering and geology. The company is committed to the development of young qualified engineers through project and client-site exposure.

CLIENT VALUE

Technically superior support from studies to implementation.

- Mining companies seeking operational improvement and reliable design support.
- Process engineering companies requiring independent technical review.
- Research institutions and test work programs needing practical interpretation.

Multidisciplinary technical support for mining operations.

Process Design & Maintenance

Concept, pre-feasibility and feasibility studies, test program management, process design, commissioning and labor planning.

Process Optimization

Plant audits, bottleneck identification, data mining, test programs, solution design and hands-on plant implementation.

Due Diligence & Peer Review

Independent technical due diligence and peer review oversight for projects and operational decisions.

Electrical, Civil & Plant Works

Electrical design, instrumentation, installation, civil construction, metallurgical plant maintenance and plant piping.

Mining & Geology Support

Mining road maintenance and repair, geology exploration support and operational field assistance.

Supply & Site Services

PPE, mining equipment, fuel supply, valve repair, filter press rollers and professional housekeeping services.

EXPERIENCE AREAS

Built for mineral processing and hydrometallurgical environments.

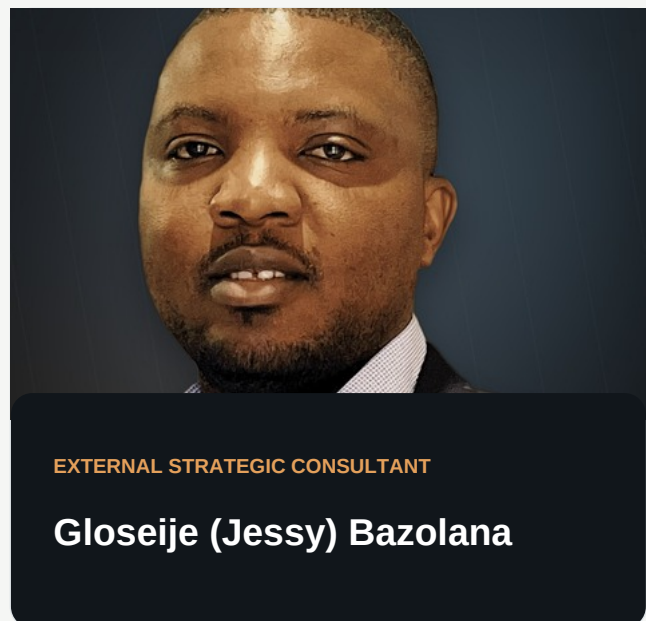

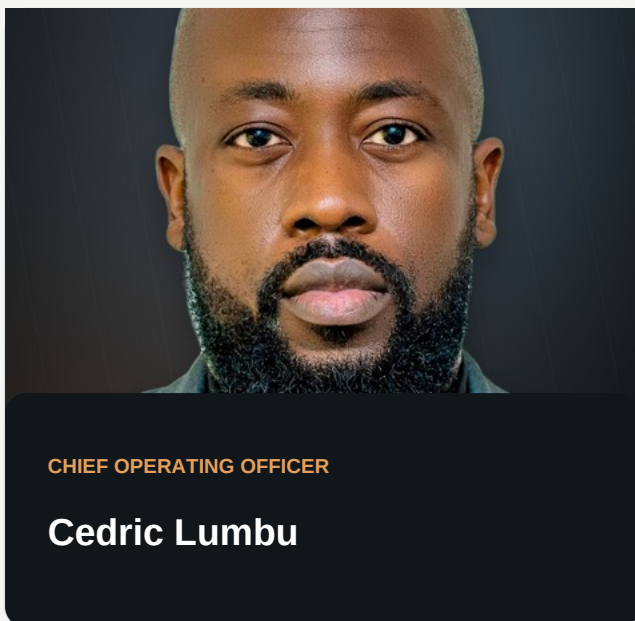

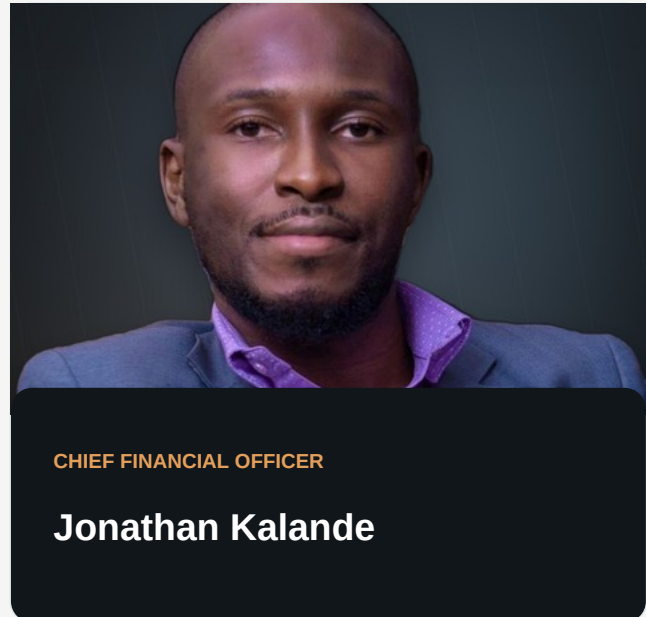

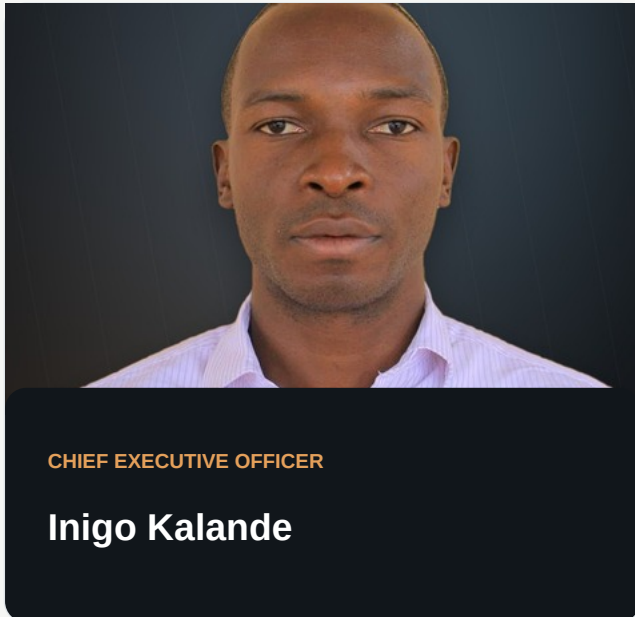

- Mineral processing circuits for platinum group metals, gold, base metals and iron ore.
- Hydrometallurgical processing for copper and cobalt.
- Flotation concentrators for platinum group metals, gold and base metals.
- Solvent extraction crud removal and organic recovery.
- Electrical and instrumentation works.
- Civil construction and maintenance of metallurgical plants.
- Plant piping, mining road repair and mining road maintenance.
- Geology exploration, PPE supply, mining equipment and housekeeping services.

SAFETY, HEALTH AND ENVIRONMENT

METCO aligns with government and industry safety, health and environmental procedures, codes and policies. SHE is treated as a primary consideration in every deliverable to industry.

LEADERSHIP

Focused management with specialist consulting capacity.
